212	7.5 ltr 7 day casings	250 x 750	7.5	80	-17°C to 98°C	400	\$ 350.00

Important guidelines:

The most secure manual method of sealing a casing is a special alloy clip with the assistance of our PanSaver® Cook & Chill Manual Clipper. Attempting to secure a clip using any other manual method can be difficult and timely.

Time is critical to longer shelf life when filling casings. To retain flavor and to acquire a 28-day shelf life, a minimum temperature of 66°C must be maintained during the filling operation. Product should be chilled from 60°C to 21°C within 2 hours. Temperature should descend from 21°C to 5°C within 4 hours. Ideal storage temperature is -2°C to 0°C.

Our pedestal holds the casing open vertically during filling. Each ring stand on the pedestal is adjustable in height to best accommodate the desired fill level. The 4-post Pedestal incorporates a "low profile" Lazy Susan base allowing easy rotation while filling the casings.

It is critical that no more than the specific capacity is packaged into each casing. A tightly packed casing requires a longer chill cycle than a loosely packed casing. Quicker cooling means longer shelf life.
